

Make sure you have the best fit possible by following these guidelines:

- ✓ Test your new boots on a clean, indoor carpeted surface for a minimum of 1 hour to be positively certain you have got the right fit.
- ✓ Perform this test at the end of the day. Feet swell throughout the day and an end-of-day test ensures a proper fit.
- ✓ Wear your normal socks. The thickness of the socks you use will affect the fit of your boots.
- ✓ Re-lacing your shoes may give you a better fit.
- ✓ Still having a fit problem? Return new, unused boots within 30 days for an exchange or refund (less shipping charges)

Your Boots Fit If:

- ✓ You have a thumbnail's width between the end of your toe and the tip of the boot.
- ✓ Your heel and instep are snug, but not tight.
- ✓ Your arch matches the boot's arch pad.

Bigger is Better!

**Remember, a boot that has a more generous fit is better than one that fits tightly.
